

This, briefly, is EIA

The Electronic Industries Association is a non-profit organization representing manufacturers of electronic products. The following are some of the major objectives of EIA:

- to provide a forum within the framework of our national laws and policies for industry representatives to discuss matters affecting the legitimate interests of the industry and to implement the policies of the Association.
- to coordinate and convey the views of Association members to appropriate bodies and allied industry organizations on legislative and regulatory matters.
- to assist the Department of Defense and the Armed Services in obtaining the most advanced and reliable products and scientific development from industry through an interchange of information and ideas.
- to stimulate public awareness of the vital role of the electronics industry in national defense, space exploration, communication, education and entertainment, and the evolution of industrial technologies.
- to advance the growth and technological progress of the industry by providing facilities and staff assistance in the development and dissemination of technical and related information, the registration of certain new products, and participation in National and International Standardization.

EIA accomplishes its objectives through an organization of eight Divisions and three Departments. The Departments provide support to the Divisions in specialty and engineering/technical areas. Nearly three hundred EIA member companies furnish the membership for over two hundred Committees and Working Groups which provide the industry expertise for specific efforts.

Washington, D.C. 20006

EIA SOURCE CODE AND DATE BOOK

1. What is the EIA Source Code?

It is a numeric symbol, assigned and registered by EIA Headquarters, which may be stamped or marked on any or all products to identify the production source or the vendor assuming product responsibility.

The EIA code, in addition, provides for adding numerals to the source code symbol to identify the year and week of production.

2. How does the date code work?

In addition to a source code, it may be desired to identify the date of production. This can be done by adding, following a hyphen (-), the last two digits of the production year plus the number of the week of that year.

A hypothetical example of the application of the EIA date code to the source code follows: Say a company is assigned the source code symbol 112. To this is added two digits for the year—such as "81" for the current year, or "82" for 1982—and another two digits for the week of the year. Thus the combined source and date codes would be, in this case:

112-8110

which would represent the company's number "112" plus "81" for 1981, the production year, and "10" for the week of March 1-7, the production week. For convenience in identifying the week, date code tables in the back of this booklet give the number of each week in both 1981 and 1982.

If a component manufacturer is unable to use the four-digit date code, an alternate three-digit code may be used by taking only the last digit of the year. The example above would then become:

112-110

3. To whom is the EIA service available?

To all manufacturers of radio-television and electronic equipment or components. This service is extended to all EIA members without charge. For non-members an annual registration service fee of \$20.00 is charged.

DID YOU KNOW

...that EIA's Engineering Department participates in a comprehensive standardization program as evidenced by over 400 standards and publications currently available through EIA?

...that these documents have been prepared and revised by more than 4,000 industry and government representatives who participate on the Engineering Department's 225 committees?

EIA standards development activity is conducted through committees and working groups made up of interested persons from EIA member and non-member companies, government, the academic community and others. The Standards Proposals which result from this activity are circulated widely for comment. Comments received are reviewed and are incorporated into the original proposal which is re-submitted to the formulating committee for further consideration and final approval. Following this approval and review by the Engineering Department Executive Committee, the document is published as an official EIA Standard and made available through sale by the Association's Standards Sales Office. Many EIA Standards become American National Standards through ANSI approval, and many form the basis of U.S. positions in international standards development in the International Electrotechnical Commission (IEC) and the International Standards Organization (ISO). *The 1981 Catalog of EIA And JEDEC Standards & Engineering Publications* is available at no charge upon request.

For further information on this and numerous other phases of the Engineering Department, please contact EIA, Engineering Department, 2001 Eye St., N.W., Washington, D.C. 20006 (202) 457-4961.
