FOR IMMEDIATE RELEASE

ECIA Compiles Best Practices for Infection Control

Atlanta – ECIA’s Global Industry Practices Committee (GIPC) has compiled a comprehensive list of best practices in COVID-19 Infection control to aid companies as they adapt to the unexpected challenges associated with the pandemic. As the world emerges from the peak of infections, a recovery process will begin, requiring substantial changes across the supply channel. It is anticipated that many of the items in the best practices document may become permanent in day-to-day operations.

“We have identified best practices that have been implemented in a collective sampling of operations,” said Don Elario, ECIA VP Industry Practices. “For the next steps, the industry needs to be looking down the road to what the new normal will be for daily operations.”

This document was developed by GIPC Subject Matter Experts (SME), who come from ECIA member companies, but also included inputs from non-member companies.

The COVID-19 Infection Best Practices List includes information for gatherings, protocols, cleaning and enforcement, and employee morale.

The complete document is available to members and non-members on ECIA’s [Coronavirus Resources page](#). There are several links to pertinent information for the electronics industry.

About ECIA

The Electronic Components Industry Association (ECIA) is made up of the leading electronic component manufacturers, their manufacturer representatives and authorized distributors. ECIA members share a common goal of promoting and improving the business environment for the authorized sale of electronic components. Comprised of a broad array of leaders and professionals representing all phases of the electronics components supply chain, ECIA is where business optimization, product authentication and industry advocacy come together. ECIA members develop industry guidelines and technical standards, as well as generate critical business intelligence. For more information, visit www.ecianow.org or call 678-393-9990.
