

Quarterly Americas DTAM Estimates 2019 to Q3 2021

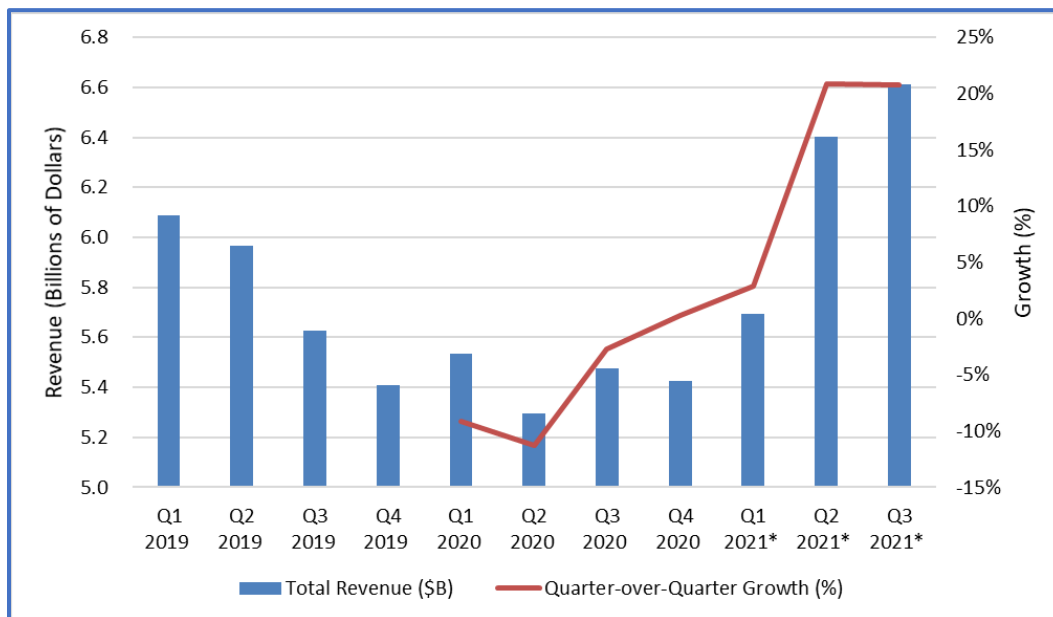

Dale Ford, Chief Analyst

Issue

Continuing with a focus on data related to the distribution market, this report delivers the latest quarterly DTAM **estimates** for the Americas for detailed component categories with data through Q3 2021. A detailed discussion of the background and methodology for this research was presented in the first quarterly DTAM report published in July 2021 and can be referenced for a more complete explanation of the work supporting this data. This latest report and the associated Excel Workbook deliver the updated results of this research and analysis to ECIA members.

As seen in Figure 1, the Q3 2021 Americas DTAM market built on the dramatic Q2 2021 surge in growth from the low point of Q2 2020 as quarterly revenues have now exceeded \$6.6 B and sustained year-over-year growth of 21% between Q2 and Q3 2021. The trend shown in this latest update sets the stage for a record setting year for revenues in 2021 topping the revenues in 2019 of \$23.1 B. These results are consistent with the overall surge in economic growth over the past year as well as the Electronic Component Sales Trends (ECST) research published by ECIA that have pointed to extremely strong growth that continued through the first three quarters of 2021. While all component categories are achieving strong growth there are some areas that are growing substantially higher than others.
